

Five Reasons Why Local Governments Choose Box

Move Records, Papers and Documents to the Cloud

City Halls and Police Departments collect and store large quantities of files, records and documents in physical file cabinets. With Box, save money, improve the safety and security of the files, and make it easier to access those documents from anywhere.

Collaborate on Bids and Contracts

Complex processes like contracting or bidding require intensive collaboration, workflow and automation across a diverse set of players. The secure Box platform allows internal and external agencies to work together on photos, GIS data, and legal forms to easily negotiate, assess and create simple bid and contract management processes.

City Workers are More Mobile

Box keeps your content secure and available from any mobile device. It integrates with thousands of mobile productivity applications, so your team can always get work done on the go. Whether they're supporting people in the field or working with City Hall, Box streamlines how your staff collaborate and share content everywhere.

Stay Within Budget

With city budgets increasingly shifting from CapEx to OpEx, Box represents an ideal solution with its subscription Software-as-a-Service model. Cities and departments become more efficient in their work, with 86% of customers saying Box improves communication within their company.

Connect with Constituents

Traditionally, public sharing of content and data was both costly and a potential security risk. Box lets you set granular permissions, encryption - in transit and at rest - and reporting capabilities. City governments can now use Box to interact with their citizens and share sensitive information, thanks to granular permissions, encryption in transit and at rest, and detailed reporting capabilities.

Please consult your Box Channel Partners for schedule and contract options.
